

Navy Seaport-e

Net World Technology Corp was awarded a prime contract for SeaPort-e.

Requirements from Solicitation and Contract

H.11 CONTRACTOR WEBPAGE

It is a material contract requirement that each IDIQ holder maintain a publicly available webpage throughout the period of performance of the contract. The purpose of the webpage is for the Contractor to communicate with potential customers regarding the Contractor's ability to provide world-class professional support services for all NAVSEA Program Executive Offices, Directorates, and field activities. The webpage should demonstrate the functional capability associated with different products or business areas. The webpage should be easily accessible from the Contractor's front page and intuitive for novice computer users. This webpage at minimum must include the following items:

- A list of all team members proposed and their capability/area of expertise (See below);
- A list of the last 3 years services experience, for all team members listed in Exhibit A of this solicitation, listed by functional area and specific Program, as appropriate. The Contractor may also include a description of the products (deliverables) provided.
- Point(s) of Contact to provide information on customer satisfaction with the services performed;
- A description of the Contractor's quality assurance program;
- Points of contact for information related to the SeaPort program

Net World Technology Information

The contractor shall provide the SeaPort Contracting Officer with the web address within 10 government working days of receipt of the contract. Failure to maintain the website may adversely impact the IDIQ holder's ability to win task orders as the information provided on the website may be used as part of the fair opportunity to be considered for certain task orders.

To comply with the above requirements the following are provided:

Contract #: N00178-09-D-5781

Period of Performance: December 18, 2008 - December 18, 2018

Quality assurance program

NWT has maintained a high level of customer satisfaction among its customers, including, within the Navy, NAVSISA, and, outside the Navy, with the Commonwealth of Virginia, Commonwealth of Pennsylvania and various commercial entities. We have maintained and expanded these customer relationships by providing innovative solutions at affordable prices, even in difficult budget times. Our reputation and our participation in Seaport-e will draw these and other customers to use the vehicle, thus allowing established solutions to be applied broadly across the Navy.

Each of our projects has a primary manager or point of contact. This individual establishes and maintains good rapport with the customer. Each customer also has the NWT Team available for support. We have diverse expertise and years of experience that can be applied formally as part of the project or indirectly in the form of mentoring. We will make this same dynamic available to our engagements under Seaport-e. We will add the resources from our team members to expand the qualifications available while maintaining our Small Business spirit of personal contact and rapport.

The NWT Team offers the Navy its own qualified personnel as well as resources from other team members as identified above. This approach ensures that tasks under the vehicle are serviced by experts, not by those seeking training at the expense of the customer.

We rely heavily on requirements assessment to ensure the work we do provides a solution that satisfies the customer's true need and eliminates costly rework.
